**Cloud Platforms:** AWS, Azure

## EXTRA SKILL

Bilingual in Korean and English

# SHAWN NHA

Software Engineer

Software engineer, with knowledge of Python, JavaScript and C#. With over two years of business analysis and military operations, built strong leadership and problem-solving skills. As a passionate developer, translates ideas fast into synthesized application functionalities. Possesses a strong work ethic

## PROJECTS

- **Mapp:** Map based web application with the main feature of sharing and displaying locational messages on a global map. Created a user space with login, registration, and corresponding validations. Used Angular6 to feature different routings without refreshing the page and secured invalid routing and server access with authority guard. Used-tech: Angular6, Node.js, Express.js, MongoDB, Angular Google Map, Auth Guard, jQuery.
- **Appoint:** Web application to solve the time complexity in making medical appointments. Using a RESTful architecture to create a dashboard and a message board, which provides "one-click" appointments to doctors with a brief message of symptoms. Used-tech: Django2.0, MySQL server, HTML5, CSS3.
